Astronomy is the science that studies the universe. It deals with the properties of objects in space and the laws governing the universe. In the geocentric model, the moon, sun, and known planets—Mercury,

Center for Astronomy Education

22.3 Earth's Moon • The lunar regolith is a thin, gray layer on the surface of the moon, consisting of loosely compacted, fragmented material believed to have been formed by repeated impacts of meteorites.

22.3 Earth's Moon

The Astronomy of the Bible Has Proven Accurate. It is not commonly known that many of the Bible's statements about astronomy went against the generally accepted teachings of the time. Modern science, however, has confirmed what the Bible has taught. As in all things, the Bible is absolutely correct when it teaches about the universe.
