3D User Interfaces: Theory and Practice by Doug A. Bowman  
User interfaces are the means for communication between users and systems. 3D interfaces include media for 3D representation of system state, and media for 3D user input or manipulation. Using 3D representations is not enough to create 3D interaction. The users must have a way of performing actions in 3D as well.

In 3D user interaction (3DUI) the human interacts with a computer or other device with an aspect of three-dimensional space. This interaction is created thanks to the interfaces, which will be the intermediaries between human and machine. The 3D space used for interaction can be the real physical space, a virtual space representation simulated in the computer, or a combination of both.
