There is simplicity in the slope field for a differential equation that has no explicit dependence on time, that is, $x' = f(x)$. On each horizontal line in the tx -plane, where x has the same value, the slope field has the same value on that line. $f(x) = 0$ are constant solutions to the equation.

A differential equation together with a set of initial conditions is called an initial value problem (abbreviated IVP). Example 1.6 Consider the differential equation $y''(t) + 1 = 0$. (a) Find the general solution of this equation. (b) Find the solution that satisfies the initial conditions $y(1) = 1$, $y'(1) = 0$. Solution.
