pH of salt solutions (video) | Khan Academy

An acid is defined as a substance whose water solution tastes sour, turns blue litmus red and neutralizes bases. A substance is called base if its aqueous solution tastes bitter, turns red litmus blue or neutralizes acids. Salt is a neutral substance whose aqueous solution does not affect litmus. According to Faraday: acids, bases, and salts are termed as electrolytes.

When is a salt solution basic or acidic? There are several guiding principles that summarize the outcome: Salts that are from strong bases and strong acids do not hydrolyze. The pH will remain neutral at 7. Halides and alkaline metals dissociate and do not affect the H^+ as the cation does not alter the H^+ and the anion does not attract the H^+ from water. This is why NaCl is a neutral salt.

solution is because the cation (Na^+) and anion (Cl^-) that are produced when NaCl is dissolved are really weak acids and bases. We know this because their conjugate acid and base partners are really strong acids and bases. The conjugate base of Na^+ is NaOH and the conjugate acid of Cl^- is HCl .

Acid-Base Properties of Salts | Boundless Chemistry

The presence of the weak acid and salt acts like a "sponge" to soak up excess/additional hydrogen ions or hydroxide ions if an acid or base are added to the solution Determining

Acid or Base To determine whether a substance is an acid or a base, count the hydrogen on each substance before and after the reaction.

Acids, Bases and Salts: Experimental Definitions ...

Basic salts result from the neutralization of a strong base with a weak acid. Acid salts result from the neutralization of a strong acid with a weak base. For salts in which both cation and anion are capable of hydrolysis, compare K_a and K_b values to determine the solution's resulting pH. Key Terms
