Biological wastewater treatment harnesses the action of bacteria and other microorganisms to clean water. Biological wastewater treatment is a process that seems simple on the surface since it uses natural processes to help with the decomposition of organic substances, but in fact, it's a complex, not completely understood process at the intersection of biology and biochemistry.

More advanced biological processes can be facilitated with these systems (for example, nitrification, denitrification, deselenation, sulfide-reduction, and anammox), by having unique bacterial populations colonize the biofilm media in separate tank chambers, which can be uniquely configured to treat your facility's specific wastewater constituents.

Advanced Biological Processes for Wastewater Treatment ...

Biological treatment Biological treatment processes are widely used in both developed and developing countries to control and accelerate the natural process of organic matter decomposition. The process is often used to treat biodegradable waste materials, such as plants, food residues, and paper products, before they are disposed.
