Chapter 26B -- Capacitor Circuits
Capacitors in Series and Parallel Systems including capacitors more than one has equivalent capacitance. Capacitors can be connected to each other in two ways. They can be connected in series and in parallel. We will see capacitors in parallel first. In this circuit capacitors are connected in parallel. Because, left hand sides of the capacitors are connected to the

6 Common Problems of Capacitors - Fisika Study Center
Charges on capacitors in series are equal to each other and in this case also equal to the total charge. Therefore the charge on the third capacitor is equal to the total charge. If we know the charge, we can evaluate the voltage on the third capacitor. Voltages on both capacitors connected in parallel are the same.
