While not technically a macro nor a close up, this photo is all about highlighting the large ripples of the salad with a slick style. When you do close up and macro, you are working with very shallow depths of field. And most of your image will be out of focus. Blurred objects are difficult to recognise and they can confuse the viewer.

a level of detail not obvious to the human eye. Macro photography is such an exciting photography genre. I quite often return to macro photography when I find myself in a creative rut.

Close Up And Macro Photography

Macro photography is in essence close up photography as well. However, close up photography is not always considered as true macro photography. For example, if you have a lens that is NOT considered a real macro lens, yet offers a macro setting (as many do

nowadays), this is usually referred to as being close up photography, and not true macro.

Close-Up and Macro

Photography Tips

It is the point at which we pass from general close-up images to true macro. The term 'macro photography' is more properly applied to situations where the image size is equal to or greater than that of the subject. But it's not uncommon to see a lens with a 'Macro' label that's really just a close-up setting.

I bought this book to provide a solid background on the art of Close UP and Macro Photography. It does that. I learned the difference between close up and macro photography and the 40mm prime lens that I already own, works extremely well for close ups of the flowers and circuit boards, etc. that I use as my current subjects.
