I have to add coolant to the overflow container. I can't tell which line is the cold line. The manual say there is a coolant mark on the side that looks like the coolant mark on the overflow cap, and there is, but it's only 2 or 3 inches from the top. If I add to there when it's cold, it will certainly overflow when it heats up, right?

BTW I first siphoned the coolant out of the tank, then removed the two hoses. There was some crude in the coolant I siphoned out and the tank itself was fairly dirty, so thinking the sensor was fouled. Anyway, got the new tank and everything re-installed. Low Coolant light is off (at least for now - fingers crossed).
