Concerns have been raised about a using a bar chart to show grouped discrete data in 1 review, however, this is part of the curriculum and thus needs to be taught! Also concerns about using a bar chart for continuous data: I have now added a line over the bar chart to illustrate that line graphs are used for continuous data (in the section for line graphs).

Data Handling Task 1 Climate

Data parallelism emphasizes the distributed (parallel) nature of the data, as opposed to the processing (task parallelism). Most real programs fall somewhere on a continuum between task parallelism and data parallelism. Steps to parallelization. The process of parallelizing a sequential program can be broken down into four discrete steps.

The following is by Dennis Shea (NCAR):. A common question: "What is the best software to use for climate data processing?" There is no simple answer. All software tools and languages have strengths and weaknesses. For large scale data processing on a variety of data sets in assorted data formats and differing project requirements, it is unlikely that a perfect tool or language exists.
