Partial Dentures, a Viable Alternative to Dental Implants?

If you have one or more natural teeth remaining in either the upper or lower jaw, you can get a removable partial denture (or bridge). This is when your dentists insert replacement teeth that are connected to a gum-colored plastic base.

Dental Laboratory - an overview | ScienceDirect Topics

Removable partial dentures (or RPDs) can be a viable alternative to fixed bridgework or implants as a means of replacing missing teeth. A removable partial denture consists of replacement teeth attached to a pink or gum-colored plastic base, which is sometimes connected by metal framework that holds the denture in place in the mouth.

Denture Lab | Reliable Dental Lab

The ultimate success of your RPD (removable partial denture) will depend on many factors- the design is one important aspect. First the impressions are poured up to give a replica model of your teeth and these are mounted on an articulator.

Loading

A removable partial denture (RPD) is a prosthesis that comes in and out of your mouth, and it replaces any missing teeth you may have. A single removable partial denture can replace 1 tooth or almost all the teeth on a single arch. They are typically the cheapest treatment option available.
