Literature survey has done over coconut harvesting, dehusking and deshelling processes. The force required to break the coconut shell has done before starting the design of machine components, various mechanisms has studied to design the machine to get the desired load in desired manner.

Design and Development of Coconut Dehusking Machine

A manually operated impact-type machine for breaking cocoa pods was designed, fabricated and tested. The major components of the machine include a frame, rail, hammer, pulley, bearings and rope. The machine requires rope tension, tensile stress and cross sectional area of 128.7 N, 728 kN/m² , 1.77 x 10⁻⁴ m² respectively. Impact energy of 30.9 J is required to break one pod while 78.6 J is ...

Design and Fabrication of Coconut Harvesting Robot ...

In this study, a novel method for coconut climbing and harvesting is proposed. The design of the hardware setup is discussed and the controlling units are designed. Wireless camera is used to find the exact position of the coconut. Thus a semi automatic Cocobot model is designed. References [1].
