Although the English used in Dynamical Contact Problems with Friction: Models, Methods, Experiments and Applications may not be perfect, it is certainly more than adequate. While the figures could be improved, they too are more than adequate considering both the aims of the book and the intended audience.

Multiple Solutions in Dynamic Contact Problems With Friction

Zhou et al. solved a similar dynamic half-plane problem by including friction. The dynamic behavior of a frictional punch moving over the surface of an anisotropic material was considered by Zhou et al. . A solution for a moving contact problem between a rigid punch and a piezomagnetic medium was developed by Zhou and Kim .

friction on a part of the boundary where the normal stresses are prescribed. Many of the unresolved mathematical difficulties can be traced to the requirement of an unilateral (noncompliant) contact constraint. Infact. these unilateral dynamic contact problems are a particular case of general classes of evolution problems governed by second-order (in

Friction modeling for dynamic system simulation

Frictional contact mechanics is the study of the deformation of bodies in the presence of frictional effects, whereas frictionless contact mechanics assumes the absence of such effects. Frictional contact mechanics is concerned with a large range of different

Abstract Dynamical contact is one of the common research topics because of its wide applications in the engineering field. The main goal of this work is to develop a time-stepping algorithm for dynamic contact problems. We propose a finite element approach for elastodynamics contact problems [1].

Frictional contact mechanics - Wikipedia

Contact dynamics deals with the motion of multibody systems subjected to unilateral contacts and friction. Such systems are omnipresent in many multibody dynamics applications. Consider for example Contacts between wheels and ground in vehicle dynamics Squealing of brakes due to friction induced oscillations Motion of many particles, spheres which fall in a funnel, mixing processes Clockworks Walking machines Arbitrary machines with limit stops, friction.
