### **Elements of Dynamic Economic Modeling: Presentation and ...**

In this section, we apply particle filtering to estimate a business cycle model with investment-specific technological change, preference shocks, and stochastic volatility. Several reasons justify our choice. First, the business cycle model is a canonical example of a dynamic macroeconomic model.

### **Estimating Macroeconomic Models: A Likelihood Approach ...**

most dynamic models do not have a closed-form solution. Consequently, just to solve the model before any estimation, we need to approximate

the equilibrium path using numerical techniques. This approximation is going to affect the characterization of the likelihood. There are two main routes to evaluate the likelihood function.
