The electric potential of a point is the amount of work that has to be done, per unit charge, to move a point charge from a place of zero potential to that point. This is the electric potential energy of the point divided by the charge at that point - or electric potential energy per unit charge. The difference in electric potential between two

### **Physics Equations for Electricity and Magnetism - dummies**

Magnetism is a physical phenomenon that is propitiated by the magnetic fields. The elementary particle's magnetic moments and electric currents generate magnetic fields. The ferromagnets are greatly attracted by the magnetic fields, hence, they can be magnetized easily to permanent magnets.

### **Electromagnetism Laws and Equations**
