Green Engineering Principle #4 focuses on maximizing efficiency. This is achieved by informing scientists and engineers to create designs that maximize efficiency in multiple areas such as mass, energy, space (i.e. real estate) and time. This is a simple and logical path that should be taken and the benefits gained can be quite significant.

What is Green Engineering? - National Instruments

This is where Green Engineering comes into play. A lot of engineering goes into developing an industrial-scale process, so it's no surprise that if we want to make commercialization greener we need a new set of principles to follow. This led to the development of the 12 Principles of Green Engineering by Paul Anastas and Julie Zimmerman in 2003:

The first principle of green engineering according to Anastas and Zimmerman (2003) is perhaps the most all-inclusive and for the long-term, one the most valuable of the twelve offered. It states that "Designers need to strive to ensure that all material and energy inputs and outputs are as inherently nonhazardous as possible" (p. 96).
