Understanding the SQL Developer User Interface

To use your AdminBin application, call the `Cpanel::Wrap::send_cpwrapd_request` method. This method passes your arguments and parameters into the application via STDIN. Your subroutines are private to the AdminBin application. User-level code that calls the `Cpanel::Wrap::send_cpwrapd_request` method cannot access these subroutines because AdminBin applications execute in a separate process. The AdminBin application receives a pseudo-function name as the second argument. Use the pseudo-function ...
