KING AIRWAY FOR BLS FIRST RESPONDER Rural and Remote Areas
In this analysis of OOHCA airway management, first attempt BLS King LT-D placement success exceeded that of first attempt paramedic ETI success. In addition, patients in the King LT-D group were more likely to have had an advanced airway attempted and to have had a successful advanced airway placed when multiple attempts were required.

Esophageal Airway (King LTS-D)
The development of the LMA has been hailed as one of the most significant advances in airway management since the endotracheal (ET) tube. 9 A great deal of literature exists that reports the successful use of the LMA as a primary airway device and as a conduit for intubation of the trachea. 6 SADs are now used in a wide variety of clinical indications and their versatility and ease of use make ...

King LT-D use by urban basic life support first responders ...
Limitations to this pilot do not allow for specific comment on or validation of the efficacy of the King LT® as a first or second line airway tool. No digital end-tidal CO 2 monitoring was available; nearly all of the patients were critically ill or near dead and no patient follow-up was available for the few who survived to the ED.

Laryngeal tube - Wikipedia
In the first 9 months there was no improvement in the overall survival or proportion of patients with CPC 1 or 2 with use of the KA and ITD. The KA was removed from the BLS protocol and used by paramedics only if unable to ventilate and unable to insert an endotracheal tube. The King Airway is a Class Ila device in the 2010 AHA Guidelines (2):

Emergency Medical Services
They arrive with the first-responding engine company and find a 62-year-old male in respiratory failure secondary to exacerbation of congestive heart failure. ... Use a BLS airway adjunct.

Laryngeal Mask Airways (LMAs) | ACLS.com
The last three sentences of the first paragraph of the Suction-Based Airway Clearing Devices section don't make sense with a single study. I think you mean to say that the single study had a high risk of bias due to selective reporting (the number of episodes in which the device was used is not stated, and unknowable).
