10/24/2012. Determine a mathematical relationship for velocity: The Velocity is affected by both ω (angular velocity) and r (radius). As ω or r increase, the velocity increases, and as they decrease, the velocity decreases. $v = \omega \cdot r$, The velocity is oriented along the tangent to the curved path.)

Lady Bug: Angular Kinematics.

Description This lab is designed to help students grasp an understanding of basic rotational kinematics such as angular displacement, angular velocity, and angular acceleration. After developing those ideas, students will try to determine two rotational kinematic equations and compare them to their linear counterparts.
