The 6 to 10 in. diameter spindle rotates to do the machining. It is moved in and out (the Z axis) up to 48 in. for boring cut, drilling, setting the depth of milling cuts, etc. As in the table-type HBM, the spindle diameter and table size specify the machine size. Cutting tools: Cutting tools are the same as those used on the table-type machine.

tool tip while the chip itself flows continuously along the rake face. This type of chip is often encountered in machining operations at low speeds and is associated with high adhesion between chip and tool and causes poor surface finish. The forces acting on the cutting tool are shown in Fig. 13.4.3.
