Biology 14 - Practice Test Flashcards | Quizlet

Chapter 14 Review. It is a sequencing technique in which widely separated regions of DNA on each chromosome are first sequenced. Then, the sequence of bases on randomly generated fragments of DNA are determined. Computers then find overlapping regions between the fragments and put the fragments together by linking overlapping areas.

File0037 - Caldwell-West Caldwell Public Schools

Human Genetics: Making Karyotypes Ch. 14 Procedure 1. Observe the normal human karyotype in Figure 1. Notice that the two sex chromosomes, pair 23, do not look alike. They are different because this karyotype is of a male, and a male has an X and a Y chromosome. Figure 1 2. Identify the centromere in each pair of chromosomes.
