Dell EMC Solutions for Microsoft Azure Stack HCI
Dell EMC Microsoft Storage Spaces Direct Ready Nodes are built on Dell EMC PowerEdge R730xd, 740xd Storage Spaces Direct Ready Node, R640 Storage Spaces Direct Ready Node and R740xd2 Storage Spaces Direct Ready Node, and R440 Storage Spaces Direct Ready Node servers that provide the storage density and compute power to maximize the benefits of Storage Spaces Direct and the advanced feature sets in Windows Server 2016 and Windows Server 2019.

Deploy a two-node Storage Spaces Direct SoFS for UPD ...
Hardware designed just for Microsoft Storage Spaces Direct. Dell EMC Microsoft Storage Spaces Direct Ready Nodes are pre-configured with certified components and validated building blocks that can simplify ordering and reduce deployment risks while providing a superb customer support experience.

Storage Spaces Direct overview | Microsoft Docs
Applies to: Windows Server 2019, Windows Server 2016. This topic describes minimum hardware requirements for Storage Spaces Direct. For production, Microsoft recommends purchasing a validated hardware/software solution from our partners, which include deployment tools and procedures.

Storage Spaces Direct - Deploying End-to-End | Windows ...
Storage Spaces Direct can be deployed two ways. In the hyper-converged deployment, the Hyper-V clusters and storage are on the same hardware; Microsoft says this model is more appropriate for smaller scale-out arrangements.

Microsoft Storage Spaces Direct (S2D) Deployment Guide ...
Description This video looks at a complete end-to-end walkthrough of the deployment of Storage Spaces Direct. Leveraging the S2D Experience Guide (<https://technet.microsoft.com/en-us/library/mt126109.aspx>), you will see every command used to fully deploy a ~139TB Spaces Direct 4-node cluster.

Deploy a Storage Spaces Direct hyper-converged cluster in ...
Microsoft just published an Azure template to deploy a Storage Spaces Direct scale-out file server! You can use the template to create your deployment, or use the steps in this article. We recommend deploying your SoFS with DS-series VMs and premium storage data disks, where there are the same number and size of data disks on each VM.

Microsoft Storage Spaces Direct (S2D) Deployment Guide
When you set up the cluster, remember to select the Enable Storage Spaces Direct option on the General Configuration page of the Create Hyper-V Cluster wizard. -In Resource Type, select Existing servers running a Windows Server operating system, and select the Hyper-V hosts to add to the cluster. If S2D is enabled, you must validate the cluster.

What is Microsoft's Storage Spaces Direct? - Petri
In general we recommend the following guidelines for Storage Spaces deployments: All hardware should be uniform. Select only 1 model of JBOD, 1 model of SAS HBA, and try to limit the number of drive models to 2. Ensure that all hardware (drives, servers, NICs, and controllers) has the latest available firmware version.

Storage Spaces Direct troubleshooting | Microsoft Docs
for Microsoft Storage Spaces Direct, making them incredibly convenient to procure and deploy Dell EMC publishes a deployment guide that covers multiple scenarios to make deployment even easier And Dell EMC tests beyond WSSD certification requirements so you get a high-quality offering that minimizes downtime

Microsoft Storage Spaces Direct Deployment
Storage Spaces Direct supports two deployment options: hyper-converged and converged, also known as disaggregated. Familiarize yourself with the advantages of each to decide which is right for you. Steps 1-3 below apply to both deployment options. Step 4 is only needed for converged deployment.

Dell EMC Microsoft Storage Spaces Direct Ready Nodes
Microsoft Storage Spaces Direct (S2D) Deployment Guide used in this solution, each server node is itself a JBOD (just a bunch of disks) repository. As demand for storage and/or compute resources grow, additional ThinkAgile MX Certified Nodes can be added into the environment to provide the necessary storage

Performance Consideration for Disaggregated and Hyper ...
Microsoft has invested a lot of effort to develop a new way to deliver storage, that is more scalable, easier to deploy, and offers more disk options. This has resulted in a new architecture called...

The hyper-converged deployment scenario has the Hyper-V (compute) and Storage Spaces Direct (storage) components on the same cluster. Virtual machine files are stored on local CSVs.

Dell EMC Microsoft Storage Spaces Direct Ready Nodes ...
In deployments with multiple types of drives, Storage Spaces Direct automatically uses all drives of the "fastest" type for caching. The remaining drives are used for capacity. Which type is "fastest" is determined according to the following hierarchy. For example, if you have NVMe and SSDs, the NVMe will cache for the SSDs.

Storage Spaces Direct Hardware Requirements | Microsoft Docs
Use the following information to troubleshoot your Storage Spaces Direct deployment. In general, start with the following steps: Confirm the make/model of SSD is certified for Windows Server 2016 and Windows Server 2019 using the Windows Server Catalog. Confirm with vendor that the drives are supported for Storage Spaces Direct.

What is Microsoft Storage Spaces Direct? - Definition from ...
The R740xd2 Storage Spaces Direct Ready Node provides dense storage capacity configurations optimized for software-defined storage implementations that enable converged infrastructure (CI) and hyper-converged infrastructure (HCI) deployments such as the architecture recommended in this deployment guidance.

Deploy Storage Spaces Direct | Microsoft Docs
Deployment options. Storage Spaces Direct was designed for two distinct deployment options: Converged. Storage and compute in separate clusters. The converged deployment option, also known as 'disaggregated', layers a Scale-out File Server (SoFS) atop Storage Spaces Direct to provide network-attached storage over SMB3 file shares.

Dell EMC Storage Spaces Direct (S2D) Ready Nodes for ...
There are two targeted deployment scenarios for Windows Server 2016 Storage Spaces Direct (S2D). Both cases provide storage for Hyper-V, specifically focusing on Hyper-V IaaS (Infrastructure as a Service) for Service Providers and Enterprises. The disaggregated deployment scenario separate has the Hyper-V servers (compute node) in a separate cluster from the S2D servers (storage node).
