Modern infectious disease epidemiology / Johan Giesecke

Modern infectious disease epidemiology relies heavily on mathematical modeling to characterize the complex interactions between the biology and environment of human or animal hosts, the pathogens responsible for disease and, where present, vector species. Transmission models are vital for understanding the dynamics present in the spread of infectious agents in populations and for assessing the likely impact of public health interventions such as isolation, vaccination and chemotherapy.

Infectious Disease Epidemiology - an overview ...

4. Modern Epidemiology a. The modern approach in describing an infectious disease focuses on: • the interaction of the disease agent, • the host, and • the environment. b. The disease agent, the host, and the environment interact dynamically to produce disease. All three of these are constantly changing:
