Optical Fiber Transmission - an overview | ScienceDirect ...
By using a high-gain antenna or optical system which concentrates the radiation into a narrow beam aimed at the receiver, it can be used for long range power transmission. [36] [41] From the Rayleigh criterion , to produce the narrow beams necessary to focus a significant amount of the energy on a distant receiver, an antenna must be much larger than the wavelength of the waves used: $D_{ant} \gg \lambda = c/f$. [42]
