MDCT Evaluation of Pancreatic Cancer: Current Concepts in Detection and Staging Part 1

Over the course of 30 years, the 5-year survival rate among all stages of pancreatic cancer has only increased from 3% in 1975 to 8.9% in 2009 [4]. Surgical resection remains the only chance for cure, but despite this and standard chemotherapy, the 5-year survival rate for resected disease is less than 30% [5].

Current concepts and novel targets in advanced pancreatic ...

Pancreatic cancer begins in the tissues of your pancreas – an organ in your abdomen that lies horizontally behind the lower part of your stomach. Your pancreas releases enzymes that aid digestion and hormones that help manage your blood sugar. Pancreatic cancer typically spreads rapidly to nearby organs. It is seldom detected in its early stages.

Pathologic classification of "pancreatic cancers": current concepts and challenges As the most common and most important cancer of the pancreas, with rapid mortality and now also as the third leading cause of cancer-related deaths in the United States, pancreatic ductal adenocarcinoma (PDAC) has become synonymous with "pancreas cancer".

Pancreatic Cancer Current Concepts In

Current pancreatic cancer models are similar to that of colon cancer, in which there is a progression from precancerous lesions to invasive carcinomas. Pancreatic cancer evolves from normal ductal epithelium, to pancreatic intraepithelial neoplasms/ductal lesions, to invasive adenocarcinomas [27;28]. The ductal epithelium undergoes changes that are characterized by PanIN-1A.
