This video explains the cell structure and function of each organelle for your Anatomy & Physiology class. I explain the function of all the structures such as the mitochondria, nucleolus ...

Physiology Cell Structure And Function

Cell membrane. Functions include: supporting and retaining the cytoplasm; being a selective barrier; The cell is separated from its environment and needs to get nutrients in and waste products out. Some molecules can cross the membrane without assistance, most cannot. Water, non-polar molecules and some small polar molecules can cross.
