Download Java for Linux

The Java full names and the call spec parameters, which are mapped by position, must correspond one to one. (This rule does not apply to method main. See Example 2.) If the Java method takes no arguments, code an empty parameter list for it but not for the function or procedure. As usual, you write Java full names using dot notation.

In the toolset configuration we'll be using, our IDE (IntelliJ IDEA) will be communicating with GitHub via SSH ("secure shell"); we'll also be communicating with GitHub via SSH from a command line. To do this, we need a private key that can be used to encrypt data, and GitHub needs a matching public key. In this environment preparation step, you'll generate that pair of keys, and ...
