Python A453 Maths Quiz Games - alfagiuliaforum.com

For this challenge we will create a maths quiz consisting of ten arithmetic questions. Each question will be randomly generated using two random operands between 1 and 12 and one random operator, either + (addition), - (subtraction) or x (multiplication). We will not include the division operator as this could result in a decimal value. We will include a scoring system to our quiz. The player ...

Things to Know About the Code Above. Much simpler than the text-based adventure game, the quiz uses the same basic ideas. Such as: print, variables, and the time module. In this case, instead of using sword and flower as a variable, it uses correct. When a user selects the correct answer (i.e. correct += 1) they will be given one point. If incorrect, they will receive zero points.
