Robert Resnick promotes special relativity in his 1967 book "Introduction to Special Relativity". Starting on page 53 discussing clock synchronization, figure 2-1 illustrates simultaneous lightning strikes in two frames, one resting and the other moving. Signal motion in the rest frame is ballistic while in the moving frame it is absolute.

It's a clear, patient, matter-of-fact introduction to the subject which takes the time to clarify many of the obscure and seemingly contradictory aspects of special relativity. It's written about at the level of the famous Halliday and Resnick university physics books. I found the book to be very useful as an introduction.

(relativity being too controversial then). Einstein wrote two theories of relativity; the 1905 work is known as "special relativity" because it deals only with the special case of uniform (i.e. non-accelerating) motion. In 1915 he published his "general theory of relativity", dealing with gravity and acceleration. Strange things happen in accel-

Basically, special relativity can be stated as the invariance of any spacetime interval (that is the 4D distance between any two events) when viewed from any inertial reference frame. All equations and effects of special relativity can be derived from this rotational symmetry (the Poincaré group) of Minkowski spacetime.
