Sql Precompiler In Oracle Database 10g Express Edition

Oracle has also added two packages to support conditional compilation: the DBMS_DB_VERSION package, which you can use to analyze the version (in both absolute and relative terms) of the instance of Oracle Database to which you are connected, and the DBMS_PREPROCESSOR package, which allows you to see your code after all conditional compilation directives have been executed.

Sql Precompiler In Oracle Database 10g Express Edition

Rather than uncompress the file in a separate process, you can use the preprocessor feature of Oracle Database 11g Release 2 with external tables to uncompress the file inline. And you will not need to change

Where To Download Sql Precompiler In Oracle Database 10g Express Edition

the ETL process. To use the preprocessor feature, first you need to create a preprocessor program.

Since the Oracle Precompilers treat an embedded PL/SQL block like a single embedded SQL statement, you can embed a PL/SQL block anywhere in an Oracle Precompiler program that you can embed a SQL statement. For more information on embedding PL/SQL blocks in Oracle Precompiler programs, see Chapter 6, "Embedded PL/SQL". Example

5.1 Overview. Oracle Programmatic Interfaces are tools for application designers who wish to use SQL statements to access an Oracle Database from within high-level language programs. The following types of programmatic interfaces are available: The Precompiler Interface, which is a programming tool that enables you to embed SQL statements in high-level language source code

Oracle Database provides a FIPS flagger to help you write portable applications. When FIPS flagging is active, your SQL statements are checked to see whether they include extensions that go beyond the ANSI/ISO SQL92 standard. If any non-standard constructs are found, then Oracle Database flags them as errors and displays the violating syntax.

To run the Oracle Pro*COBOL Precompiler, you issue the command. `procob [option_name = value] ...` See Oracle Database SQL Reference for the list of date format model elements. There is one restriction on the use of the DATE_FORMAT option: All compilation units to be linked

Where To Download Sql Precompiler In Oracle Database 10g Express Edition

together must use the same DATE_FORMAT value.

5 How Oracle Database Processes SQL Statements

The dbms_preprocessor package can be used in conjunction with the dbms_db_version package when the user is evaluating the conditional compilation PL/SQL feature. The sole purpose of the dbms_preprocessor package is to provide an interface for displaying the source text of a PL/SQL program unit after conditional compilation directives have been applied.

Embedded SQL Statements and Precompiler Directives

The term embedded SQL refers to SQL statements placed within an application program. Because it houses the SQL statements, the application program is called a host program, and the language in which it is written is called the host language. For example, Pro*C/C++ provides the ability to embed certain SQL statements in a C or C++ host program.
