The Stirling Engine The Stirling engine was invented in 1816 by the Rev. Robert Stirling who sought to create a safer alternative to the steam engines, whose boilers often exploded due to the high steam pressures used and limitations of the primitive materials available at the time.

The key principle of a Stirling engine is that a fixed amount of a gas is sealed inside the engine. The Stirling cycle involves a series of events that change the pressure of the gas inside the engine, causing it to do work. There are several properties of gasses that are critical to the operation of Stirling engines:

Stirling engine - Wikipedia

The Stirling engine is a heat engine that is vastly different from the internal-combustion engine in your car. Invented by Robert Stirling in 1816, the Stirling engine has the potential to be much more efficient than a gasoline or diesel engine .

displacer. That means it's a variation on the beta configuration. The displacer and the piston work together to push down to one corner of a rhombus, which causes it to push down while simultaneously pushing out.

Stirling engines (formerly referred to as steam engines) are the second tier of engine. They use cobblestone instead of wood or iron so are still cheaper than the Combustion Engine. Previously, it had been stated that Stirling Engines would not blow up and would simply stop operating when heated too much.

Stirling Engine - Official Feed The Beast Wiki

This model is a great example of a Stirling Engine, which means it's an external combustion engine. Once you light the included alcohol lamp, it generates heat inside a small piston, which pushes a flywheel which then exchanges it with cold air from a second piston, which is re-heated and the cycle repeats itself.

Applications of the Stirling engine - Wikipedia

Stirling engines work best in machines that need to produce power continuously using the difference between something hot and something cold. They're ideal for solar power plants, where the Sun's heat plays on a mirror that acts as the heat source, and high-efficiency combined heat and power (CHP)...
