Once we find the electric potential function  $V(r)$ , we can then determine the total electric field by taking the gradient:  $E(r) = -\nabla V(r)$  ( ) Thus, we now have three (!) potential methods for determining the electric field produced by some charge distribution  $\rho(r)$ : 1. Determine  $E(r)$  from Coulomb 's Law.

Electric Potentials graphs | Physics Forums

An electric potential (also called the electric field potential, potential drop or the electrostatic potential) is the amount of work needed to move a unit of charge from a reference point to a specific point inside the field without producing an acceleration. Typically, the reference point is the Earth or a point at infinity, although any point can be used.
