The Great Transition: Climate, Disease and Society in the ...

He confronts the Black Death enigma of rapid transmission and high mortality for a pathogen that, during the 'Third Pandemic', produced a rodent disease, in which humans participate only occasionally and which spreads slowly because of its complex mechanisms of transmission, involving incubation periods among rats, fleas and humans, and wholesale collapses of rodent populations.

The Great Transition Climate Disease

A major new account of the fourteenth-century crisis when climate change, disease and a transformation of the military and political balance of power reshaped the medieval world. Bruce Campbell reveals how these factors combined in a devastating succession of famines, floods, human and animal mortality, wars and financial crises.

Project MUSE - The Great Transition: Climate, Disease and ...

In a major new study of this 'Great Transition,' Bruce Campbell assesses the contributions of commercial recession, war, climate change, and eruption of the Black Death to a far-reaching reversal of fortunes from which no part of Eurasia was spared.

Great Transition: Climate, Disease and Society in the Late ...

The new world that the Great Transition ushered in was colder, wetter, and more disease ridden than any humans had ever known before. Historians of the early modern period have recognized the climatic period known as the Little Ice Age (LIA) for some time. 1 For the history of medicine, no agreed-upon term has arisen for this regime of intense infectious diseases, which were in full global circulation after 1492.

The Great Transition: Climate, Disease and Society in the ...

This volume brings the study of climate and disease to bear on what economic historian Bruce Campbell argues was a "Great Transition" in medieval European society. The book is broken into five chapters, each with numbered social science style subheadings, followed by a brief epilogue.

The Great Transition: Climate, Disease and Society in the Late-Medieval World. This is a thesis of growth by disaster, a sort of neutron bomb that counteracted the morcellement produced by intense demand for land: a considerable proportion of capital-in-land was not exactly untouched but was at least reusable. Extra-somatic sources of technical knowledge also survived.
