EL34 - Wikipedia

The Counterpoint SA-4 is a case in point. With the right speakers, it competes for the title of "Most Transparent Amplifier Available at Any Price." On the other hand, this amplifier steadily loses output power as speaker impedance drops; it must be carefully matched to the right speaker.

Tube Guitar Amp Troubleshooting - Rob Robinette

The self-split power amp works like this: The guitar signal on the upper power tube grid changes the current flowing through the tube which causes a voltage drop across the cathode resistor. This voltage drop is also present on the lower power tube cathode and since the lower grid is grounded (common grid) the voltage changes on the cathode affect the current flowing through the lower power tube.

Op Amps for Everyone Design Guide (Rev. B)

Hi everyone. I'm currently waiting for my recent purchase of a Musical Paradise mp301 mk3 integrated tube amp. The amp supplies 6.5 watts and requires speakers of at least 89db sensitivity if I remember right. Knowing this I just gave away my old low efficiency Pioneer bs-21 speakers to my sister along with a cheaply acquired Marantz 6100 turntable.

4. Who should use "Matched Sections" pre-amp tubes? For guitar players: if your amp has a "phase splitter" (or "phase inverter") it is important to have matched triode sections in this tube location because of how the tube is used in the circuit. For example, Fender amps often have a 12AT7 that is used this way.
