The Pelamis Wave Energy Converter was a technology that used the motion of ocean surface waves to create electricity. The machine was made up of connected sections which flex and bend as waves pass; it is this motion which is used to generate electricity.

Ocean Wave Energy Conversion System

Wave power is the capture of energy of wind waves to do useful work – for example, electricity generation, water desalination, or pumping water. A machine that exploits wave power is a wave energy converter (WEC).. Wave power is distinct from tidal power, which captures the energy of the current caused by the gravitational pull of the Sun and Moon.Waves and tides are also distinct from ocean ...

Wave devices : EMEC: European Marine Energy Centre

Generated energy from ocean power devices can be converted into electrical or mechanical energy, which can in turn be used as a driving force together with the desalination and water treatment by reverse osmosis processes. In this article, applications of high pressure wave energy converters (WEC) and hydrokinetic turbine for current
